## CTI TECH TIP What Do I Need to be Concerned About When Towing?

### Weight distribution:

If you're trying to figure out how to properly load your trailer, there are a few things you need to know. Yes, normally it is a good rule of thumb to load 60% of your weight towards the front of the trailer but it all just depends on what you are towing and it varies between each and every load. You should not load 60% of your weight onto the front of your trailer and call it good. You should be keeping your tongue weight of your trailer between 10-15% of your gross trailer weight as long as it's within the maximum recommended tongue weight of the OEM (Typically around 300 Lbs.) Sometimes loading 60% of your load onto the front of your trailer will exceed that 15% tongue weight range and is therefore more susceptible to impaired vehicle performance, swaying and impaired braking control. Consider using a weight distribution hitch for added control. In addition, keep heavy items low in the load and secure all with multiple tie down straps in case one fails.

### Cooling:

Towing puts extra strain on your engine, which can cause it to overheat. To prevent overheating, your vehicle should have a well-maintained cooling system, including the radiator, coolant, and fan. Some vehicles designed for towing have additional engine radiators or fans specifically for this purpose.

The transmission works harder when towing, producing more heat. It's recommended to keep your transmission fluid temperature between 180 and 200 degrees. Going above 220 degrees can dramatically lessen your transmission's lifespan. To help prevent overheating consider adding an auxiliary transmission cooler and servicing the transmission fluid before towing.

### Tires:

Tires play a crucial role when towing with a pickup. Here are some important considerations:

- Light Truck (LT) tires are recommended for towing as they are designed to carry the extra load.
- The load index indicates how much weight the tire can support. A higher load index means the tire can handle a heavier load, which is important when towing.
- Maintaining the correct tire pressure is crucial when towing. Under-inflated tires can overheat and lead to a blowout, while over-inflated tires can lead to poor traction.

- Check your tires for any signs of wear, damage, or aging. Tires should be replaced every 3 to 4 years regardless of mileage.

- Remember, always refer to your vehicle's owner's manual and the tire manufacturer's guidelines for specific information about tire type, load index, and tire pressure when towing.

### Brakes:

Vehicle brakes need to be in not only good condition but GREAT condition. Especially if you are not using trailer brakes. Consider upgrading pads to a more heat resistant application. Make sure that the brake fluid is fresh. Old brake fluid may not have the maximum heat rating it did when new. If you are using trailer brakes, there are two basic types to consider.

- Electric Brakes are the most common type of trailer brake. An electromagnet is used to activate the brakes when the driver applies brakes on the towing vehicle. This type of brake gives the trailer more ease when braking compared to surge brakes. Electric trailer brakes require some type of brake controller that have adaptable settings to control the brake force you need. Many vehicles today have built in controllers, especially if they are equipped with a tow package. Having an independent controller will allow you to apply just the trailer brakes to control swaying if it starts.
- In contrast, Surge Brakes are hydraulic and use the trailer's natural momentum to actuate the brakes. When you step on the brake in your tow vehicle and slow down, the trailer pushes against the hitch and presses a hydraulic cylinder. The more you slow down the vehicle, the more pressure on the trailer brakes. When they are adjusted properly, surge brakes are smooth and easy to work with. The downside is that you cannot separately actuate the trailer brakes if the trailer is swaying.

Evaluate the whole package to eliminate weak points and ensure that your trip is safe and uneventful. Breakdowns or lack of trailer control can not only be costly but also dangerous.

## JUMP STARTERS

**DieHard**

### DieHard® Platinum 2000 Peak Amp Lithium Jump Starter and Power Pack

- Advance four-cell lithium-ion battery give longer battery life and more charge cycles
- Holds 75% of its charge level after two years
- The 2000 peak amp jump start feature easily starts up to 8.0L gas and 6.0L diesel engines up to 50 times on a single charge
- Provides reliable jump-starts in temperatures down to -20°C.
- Comes with 10W wireless charging pad to charge smart phones and other mobile devices

CBC DH0170

**\$209<sup>99</sup>**

### DieHard® Gold 1200 Peak Amp Lithium Jump Starter and Power Pack

- Delivers 1200 peak amp jump starting power which can easily start up to 6.0L gas engines
- Provides reliable jump-starts in temperatures down to -20°C
- Advance four-cell lithium-ion battery ensures up to 35 jump starts on one charge, as well as a longer life than traditional AGM batteries
- The 2.4-amp USB port delivers 2x faster charging and the 3-amp USB port charges 4x faster
- The LED light is ideal for emergencies with three lighting modes

CBC DH0165

**\$209<sup>99</sup>**

### DieHard® Platinum Four-in-one 1500-Amp Jump Starter and Portable Power Station

- Advanced lithium battery is lightweight, provides longer battery life and more charge cycles
- A four-in-one device, including a jump starter, portable power station, air compressor, and LED light
- 1500 peak amp jump start feature easily starts up to 6.0L gas and 3.0L diesel engines
- 2.4-amp USB port charges your mobile devices two times faster
- 150-PSI air compressor quickly adds air to bike or car tires and comes with an air compressor gauge, nozzles, and a storage bag
- The smart cable/clamps provide protection against reverse polarity, short circuit, low voltage, high temperature, and reverse charging

CBC DH0166

**\$229<sup>99</sup>**

### DieHard® Gold 6-in-1 Portable Power Station and Jump Starter

- Six functions – Portable power station, jump starter, inverter, air compressor, inflator/deflator, and LED light
- Easily starts up to 6.0L gas engines using the 1200 peak amp jump start feature
- It features fast 15-amp charging and 5-amp charge/maintain modes
- 200 continuous watt/400 peak watt power inverter provides stable household power to the two 120-volt AC outlets
- It also features two 12-volt DC accessory outlets, and two 2.1-amp (total) USB ports
- High-volume, low-pressure inflator and deflator ports allow you to quickly inflate/deflate mattresses, pool toys, and more

### Schumacher® 100A 6V/12V Fully Automatic Battery Charger/Engine Starter

- 100A Engine Start/30A Boost
- Microprocessor-controlled, automatically adjusts amperage rate, to charge and maintain batteries
- Multi-stage charging for added precision, safety and battery life
- Float mode monitoring maintains optimum battery charge
- Reverse hook-up protection

CBC SC1308

**\$169<sup>99</sup>**

### Schumacher® 1.5A 6/12V Fully Automatic Battery Maintainer

- Works with standard and AGM batteries
- Specifically designed for vehicles in storage and cold weather
- Includes double-sided adhesive and cable tie for mounting
- Approved for under-the-hood mounting
- Multi-stage charging and float mode monitoring

CBC SC1300

**\$69<sup>99</sup>**

## BATTERY TESTERS

### Schumacher® Digital 12V Battery Tester

- Hand-held tester checks the battery, starting and charging systems with digital accuracy
- For 12V SLI, VRLA, AGM and Gel batteries
- Accepts rating types CCA, CA, EN, IEC, DIN and SAE
- Operating range: 100-1200 CCA (SAE)
- Testing voltage: 7-15V

CBC BT175

**\$84<sup>99</sup>**

### Schumacher® Battery Load Tester

- Test load, battery condition, starter motor draw and complete charging system diagnosis
- 50 amp load test for 6 volt batteries
- 100 amp load test for 12 volt batteries
- Tests 6 and 12 volt batteries – up to 1000 CCA
