CTI TECH TIP

Scan tool must-have features

There is hardly any area of automotive repair that does not require a capable scan tool to complete successfully. There are many choices and many price ranges for the automotive technician when it comes to scan tool purchases. The capabilities of your scan tool are very much dependent on your work mix and your future aspirations for the vehicles and systems you work on. Make your choices based on what you work on now and what you want to progress to in the future. Here are some of the essential features a professional automotive technician should look for in a scan tool:

Core functionalities:

- Code reading and clearing: The ability to read diagnostic trouble codes (DTCs) from various vehicle systems (engine, transmission, ABS, SRS, etc.) and clear them after repairs. This includes the ability to access pending codes (or one trip failures of a monitor) that may not turn the MIL on.
- Live data streaming: Real-time monitoring of sensor data and actuator values to diagnose issues and verify repairs. It's not enough just to be able to read data. Your scanner must also give you the ability to choose data groups so you can focus on information that's important and hide information that doesn't relate to your diagnosis.
- Freeze frame data: Access to a snapshot of vehicle conditions at the time a fault code was set. Freeze frame cannot only give you additional clues about the conditions that were present at the time of the DTC monitor failure but also will help you recreate those conditions.
- On today's vehicles it's also crucial to be able to do an all-module DTC scan. Operation of subsystems today requires the inclusion of multiple modules. It's always a good diagnostic first step to do an all-module DTC scan to see if those DTCs are related to the root cause of your problem.

DSR® JUMP STARTERS

DSR® ProSeries 4400 Peak Amp 12V Jump Starter/Portable Power Station

- Compatible with 12V and 24V AGM, deep-cycle, gel, lead-acid, and wet cell batteries

- Heavy-duty clamps
- Reverse polarity protection. Override Mode to start engine without any battery mounted
- Glow Mode for cold start of diesel engine

CBC DSR132

\$469⁹⁹

Advanced features:

- Bi-directional control: The ability to control vehicle systems and components to perform tests and adjustments. Bidirectional controls can quickly tell you whether the problem is an input to a module or the ability of that module to operate an output.
- Special functions: Support for manufacturer-specific functions like battery monitor resets, oil service resets, TPMS programming, and ABS bleeding. Look at the typical work mix for your shop and choose a tool that provides the special functions that you need.
- Diagnostic trouble code lookup: Built-in DTC definitions or the ability to access online databases for detailed information. DTC definitions in the scan tool tend to be brief. However, many Android based tablets also give you the ability to reach out to your online service information platform.
- Data recording: Recording data over time to identify intermittent issues or analyze performance trends. It pays here to select your data PIDs specifically to increase the refresh rate and minimize file size.
- Oscilloscope capabilities: Many scan tools today are equipped with oscilloscopes. This gives the technician the ability to electrically test the operation of inputs and outputs.

By considering these features, automotive technicians can select a scan tool that empowers them to efficiently diagnose and repair a wide range of vehicle issues.

JOHN BEAN® TIRE CHANGERS *JohnBean*

A John Bean® T7700 Leverless Tire Changer

- The pedal-operated pneumatic wheel lift assists in lifting heavy wheels to reduce technician fatigue and increase productivity
- The center-post clamp design has numerous benefits, most important is the drastically reduced risk of wheel damage and less clamping restriction than the turntable design
- The Pneumatic Bead Pusher assists in the mounting process of the upper bead. Its dual-purpose design offers a reverse-side hook to help lift heavy tires.
- This ergonomic hand-held nozzle injects a high-speed blast of air into the tire to raise the bead and seat the tire to the rim.
